August 21, 2018

We are pleased to report that Barnhill Contracting Company ran a 3 month trial of the Megapulse product, which was installed on our asphalt pavers, motor graders, scrapers, and dump trucks.

The trial consisted of initially recording the vital signs of batteries in service and of approximately 24 months of age, after which Megapulse was installed and subsequent tests were carried out at monthly intervals for a period of 3 months.

Results showed a steady increase in battery capacity and cold cranking amps (CCA) compared with the initial test data recorded prior to the installation of Megapulse Technology.
